Alex Morgan

Synthetic Test Candidate | alex.morgan@example.test | +1 555 010 2040 | Columbus, Ohio

PROFESSIONAL SUMMARY

Synthetic software engineering profile created only for testing the ApplyWizard Oracle Recruiting Cloud workflow. Experienced in backend systems, browser automation, data validation, and reliable delivery pipelines.

SKILLS

Python, JavaScript, TypeScript, React, Node.js, PostgreSQL, Playwright, REST integrations, CI/CD, test automation

EXPERIENCE

Software Engineer | Example Systems Lab | January 2023 - Present

- Built deterministic browser workflows with field-level validation and recovery checkpoints.
- Developed normalized data models for dynamic forms and reusable user answers.
- Added automated tests and operational logging for high-volume background jobs.

Junior Software Engineer | Sample Technology Group | June 2020 - December 2022

- Implemented internal React tools backed by Node.js and PostgreSQL.
- Improved data-quality checks for imported customer records.
- Documented production procedures and supported release verification.

EDUCATION

Bachelor of Science in Computer Science | Example State University | 2020

GPA: 3.7 / 4.0

PROJECTS

Dynamic Form Mapper - Prototype that discovers accessible form controls, records conditional visibility, and renders normalized form definitions for review.
